

So Your Pet didn't get an Antibiotic...

An antibiotic may not help your pet and here are some reasons why!

1

Your pet's illness may not be caused by bacteria. In that case, antibiotics will not work for other types of germs.

2

A cough, fever or a wound does not mean your pet needs an antibiotic

Make sure to keep our staff updated on the progress of your pet's health!

3

Supportive care may be enough to help your pet feel better
