Laboratory Animal Veterinarian – Clinical Track

The Ohio State University, Office of the Attending Veterinarian (OAV) within the Office of Research, and the College of Veterinary Medicine are seeking to hire a full-time veterinarian for a clinical track faculty position with primary responsibility for the clinical care of a variety of laboratory animal species and oversight of the experimental surgery core. Additionally, the veterinarian will provide consultation and outreach to investigators and research staff, work with animal care, research, and IACUC staff, and serve as a member of the IACUC. As a faculty member, participation in the veterinary curriculum to include teaching in the professional program and graduate education is expected. The successful candidate must be highly motivated, be able to work in a multi-location research support program, have excellent communication and interpersonal skills, and be able to function in a team environment.

The Ohio State University has established a centralized veterinary care program (OAV) supporting both agriculture and biomedical animal care and use at the institution. The successful candidate will join a team of veterinarians in the OAV, and will have responsibility for overseeing the experimental surgery core for our biomedical research activities primarily supporting researchers in the Health Sciences (Colleges of Medicine, Pharmacy, Nursing, Dentistry, Veterinary Medicine, Allied Medicine, and Public Health). The centralized biomedical animal care program is AAALAC-accredited and has an average daily census of approximately 80K animals in nine facilities. The Health Sciences complex is located on the main campus of The Ohio State, and is ideally located in an economically and culturally vibrant metropolis.

Qualifications: DVM/VMD from an AVMA-accredited college of veterinary medicine and current veterinary license in the United States. Completion of an ACLAM certified laboratory animal medicine training program or experience commensurate with ACLAM board-eligibility is preferred. Experience and competence in experimental surgery is strongly desired. The successful candidate will be appointed to a clinical track faculty position in Veterinary Preventive Medicine (50%) and an administrative appointment in OAV (50%). Salary and appointment level will be based on training and experience.

Review of applications will begin January 2017 and continue until the position is filled. Applicants should send a letter of interest and curriculum vitae, including the names and contact information of at least three pertinent references to:

Chair of OAV Search Committee
